

Future Improvements and Work

With the current stage of CIS application, there are some improvements and updates that will be pursued in the future.

1. In this version, the coupon list is stored in a text file. In the next edition, I would like to create a bigger database in an MS Excel sheet.
2. The system currently runs on an IDE, I would like to upgrade it on a full GUI in coming months using Java Applet.
3. With successful completion of the above editions and features, it has to be made secure, hence would like to add login feature for customers.
